

PAVEMENT PRIORITY REPORT

General The Pavement Priority Report is a list of all the processed streets in order by rank from highest to lowest. When the pavement condition is calculated for each test section, an average is also calculated for each street group. A street that contains 10 blocks or test sections, for example, will be reported in the priority report as one line. The block range, street name and limits will reflect the full 10 blocks.

Ranking The Rank of a street is based on the average pavement condition of the sections within the street weighted by the area of each section. But the rank also reflects a slight penalty for the amount of non-uniformity within the street.

Rank Categorization In the left-most column of the report is listed the range of rank or rank group. These groups represent the relative general remaining life of the street within the group. A definition of each group is listed in the Priority Definitions Chart.

"Some maintenance" means that routine crack sealing and repair of minor distress areas should be performed on a regular basis. These definitions provide some direction for the non-engineer and general public.

Section Categorization The right side of the pavement priority report displays a column showing total number of sections within each street. It also displays a distribution of these sections over the same categories as the rank categorization. The section distribution can be used to roughly define the types of rehabilitation that might be expected on the listed number of sections in each category. The general description of each group is listed in the Priority Definition Chart.
